DETAILED ACTION

Allowable Subject Matter

1. Claims 1,3-4 are allowed.

Re claim 1; none of the prior art of record disclose of the specific wherein Having a first directional array speaker unit having a plurality of first directional speakers arranged in an array each for emitting a first sound toward the wall surface or sound reflection board; and a second directional array speaker unit having a plurality of second directional speakers arranged in an array each for emitting a second sound with an inverse phase directly to a prescribed listening position with respect to an audio element of the first sound directly reaching the prescribed listening position directly, wherein each of the first and second directional array speaker units further includes a delay circuit for delaying the sound signal, a gain adjustment circuit for each directional speaker for adjusting a gain of an output signal of the delay circuit, and an amplifier for each directional speaker for amplifying an output signal from the gain adjustment circuit and driving the respective directional speaker, wherein the first and second directional array speaker units generate sound fields having various phases intermixed with each other, wherein the second sound from the second directional array speaker unit dampens the audio element of the first sound from the first directional array speaker unit directly reaching the prescribed listening position directly, wherein the second directional array speaker unit includes an

Art Unit: 2614

inversion circuit that inverts the sound signal to generate the second sound at the inverse phase, and wherein the delay circuit of the second directional array speaker unit adjusts the delay applied to the sound signal based on the amount of delay applied to the sound signal in the first directional array speaker unit so that the second sound directly arrives at the prescribed listening position at the same time as the audio element of the first sound directly reaching the prescribed listening position.
